PROFILE

I'm a Junior Backend / ML Developer with a degree in Applied Mathematics and Computer Science. I have work experience in Python and Java backend development, creating REST APIs and implementing applied Machine Learning solutions (YOLO, BERT, classical ML models).
I have participated twice in the regional stage of ICPC - algorithmic international competition. I'm confident working with Python, Java and Rust. I am looking for a Junior developer position in Python, Rust, Java, or in the ML field.

EDUCATION

2023 - 2023
UNIVERSITY OF MICHIGAN

- Python for Everybody

2022 - 2026
SOUTH URAL STATE UNIVERSITY

- Bachelor of Computer Science
- GPA: 4.5 / 5.0
- Diploma: Generator of test data based on model from LLM

SKILLS

- Programming Languages: Python, Java, Rust
- Backend: FastAPI, SpringBoot, Django, Rocket
- Machine Learning: Sklearn, PyTorch, TensorFlow
- Databases: SQLite, PostgreSQL, MySQL, MariaDB, MsSQL
- Tools: Linux, Git, Docker
- English: B2
- Russian: Native

WORK EXPERIENCE

Center for Kids and Youth 2026 - PRESENT
Java Developer

- Developed infrastructure for collecting employee data.
- Integrated UI for administrative purposes.
- Created encrypted database for storing all data.
- Developed a system to automate workflows, replacing manual paper-based processes with a digital solution.

ACADEMY TOP 2025 - PRESENT
Teacher of Web programming on Python

- Thought web developing on Python/Vue for students
- Taught web development fundamentals (HTML/CSS) to designers.
- Instructed numerical methods as part of an applied mathematics course.

South Ural State University 2024 - 2025
Python Developer

- Developed backend-services on Python for collecting polution statistic data for factory
- Designed and implemented functional on Python(Django)
- Performed data validation and integrity checks
- Contributed to a grant-awarded university project

ABOUT ME

I'm a student of final-year of computer science of SUSU with strong foundation in math, programming and machine learning. I've participated ICPC twice. I have experience in backend-development (Python, Java, Rust) and applied machine learning, includes detection objects on videostream with YOLO and text classification with BERT. I developed several projects using Python, Java, and Rust, including my own ORM, an Online Shop with Spring Boot, a Tauri Rust application, and a grant-funded backend system from university. I also have experience teaching programming and numerical methods.

PROJECTS

🧠 **Diploma: Generator of test data based on model from LLM** 2026

Python, C++ and LLM

- Developed a metamodel for automatic generation of test data based on task descriptions and constraints
- Created a generator that produces valid test data while respecting formal constraints

Link: Can show it by request

💻 **Online-Shop: Shop Application** 2026

Java, SpringBoot, PostgreSQL

- Developed an Online Shop application using Java, Spring Boot, and PostgreSQL, implementing REST APIs, server-side logic, and database management.

Link: https://github.com/artemii-us/Online-Shop

⚙️ **ArtemiiORM — Custom ORM library** 2026

Python, rewrite some parts on Rust

- Developing a custom ORM library inspired by Django ORM concepts
- Implemented model definitions, query abstractions, and database interactions
- Project focuses on understanding the inner workings of data mapping systems and backend frameworks

Link: https://github.com/artemii-us/ArtemiiORM

🤖 **YOLO-Based: Object detection on videostream** 2025

Python, YOLO, Computer Vision

- Implemented a YOLO-based model to detect players and shuttlecocks in badminton match videos.
- Processed video streams and extracted object-level data.

Link: https://github.com/artemii-us/bandminton-match-detection

🌐 **South Ural State University: grant-awarded project** 2024-2025

Python, Django, REST API

- Developed backend-services on Python for collecting polution statistic data for factory
- Designed and implemented functional on Python(Django)
- Performed data validation and integrity checks
- Contributed to a grant-awarded university project
